

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL RESULTS

The following Management's Discussion and Analysis ("MD&A") is a review of the operational and financial results and outlook for Tamarack Valley Energy Ltd. ("Tamarack" or the "Company") for the three months ended March 31, 2014 and 2013. This MD&A is dated and based on information available on April 30, 2014 and should be read in conjunction with the unaudited condensed consolidated interim financial statements and notes for the three months ended March 31, 2014 and 2013. Additional information relating to Tamarack, including Tamarack's annual information form, is available on SEDAR at www.sedar.com.

The condensed consolidated interim financial statements have been prepared in accordance with International Financial Reporting Standards ("IFRS"). Unless otherwise indicated, all references to dollar amounts are in Canadian currency.

For the purpose of calculating unit costs, natural gas volumes have been converted to a barrel of oil equivalent ("boe") using six thousand cubic feet equal to one barrel, unless otherwise stated. A boe conversion ratio of 6:1 is based upon an energy equivalency conversion method primarily applicable at the burner tip and does not represent a value equivalency at the wellhead. This conversion conforms with the Canadian Securities Regulators National Instrument 51-101 Standards of Disclosure for Oil and Gas Activities ("NI 51-101"). Boe may be misleading, particularly if used in isolation.

Non-IFRS and Additional IFRS Measures

This document contains "funds from operations" which is an additional IFRS measure presented in the consolidated financial statements. The Company uses funds generated from operations as a key measure to demonstrate the Company's ability to generate funds to repay debt and fund future capital investment. This document also contains the terms "net debt" and "netbacks" which are non-IFRS financial measures. The Company uses these measures to help evaluate its performance. These non-IFRS financial measures do not have any standardized meaning prescribed by IFRS and therefore may not be comparable to similar measures presented by other issuers. The Company uses net debt (bank debt net of working capital and excluding fair value of financial instruments) as an alternative measure of outstanding debt. The Company considers corporate netbacks a key measure as it demonstrates its profitability relative to current commodity prices. Netbacks, which have no IFRS equivalent, are calculated on a boe basis by deducting royalties and operating costs from petroleum and natural gas sales, including realized gains and losses on commodity derivative contracts.

- (a) **Funds from Operations** - Tamarack's method of calculating funds from operations may differ from other companies, and therefore may not be comparable to measures used by other companies. Tamarack calculates funds from operations as cash flow from operating activities, as determined under IFRS, before the changes in non-cash working capital. This is related to operating activities and abandonment expenditures, as the Company believes the uncertainty surrounding the timing of collection, payment or incurrence of these items makes them less useful in evaluating Tamarack's operating performance. Tamarack uses funds from operations as a key measure to demonstrate

the Company's ability to generate funds to repay debt and fund future capital investment. Funds from operations per share have been calculated using the same basic and diluted weighted average share amounts used in earnings per share calculations.

A summary of this reconciliation is presented as follows:

	Three months ended March 31,	
	2014	2013
Cash provided by operating activities	\$15,894,869	\$8,848,038
Abandonment expenditures	39,177	76,252
Changes in non-cash working capital	(2,488,883)	(1,918,718)
Funds from operations	\$13,445,163	\$7,005,572
Funds from operation per share -basic	\$ 0.26	\$ 0.24
Funds from operation per share -diluted	\$ 0.25	\$ 0.24

- (b) **Operating Netback** - Management uses certain industry benchmarks, such as operating netback, to analyze financial and operating performance. This benchmark does not have any standardized meaning prescribed by IFRS and therefore may not be comparable with the calculation of similar measures for other entities. Operating netback equals total petroleum and natural gas sales, including realized gains and losses on commodity derivative contracts, less royalties and operating costs calculated on a boe basis. Management considers operating netback an important measure to evaluate its operational performance, as it demonstrates its field level profitability relative to current commodity prices. The calculation of the Company's netbacks can be seen on page 6 in the section titled "Operating Netback."
- (c) **Net Debt** - Tamarack closely monitors its capital structure with a goal of maintaining a strong balance sheet to fund the future growth of the Company. The Company monitors net debt as part of its capital structure. Net debt does not have a standardized meaning prescribed by IFRS and therefore may not be comparable with the calculation of similar measures for other entities.

The following table outlines the Company's calculation of net debt (excluding the effect of derivative contracts):

	March 31, 2014	December 31, 2013
Current assets	\$19,277,543	\$17,271,850
Current liabilities ¹	(38,914,311)	(27,240,060)
Bank debt	(17,493,528)	(71,795,945)
Net debt	\$(37,130,296)	\$(81,764,155)

(1) Excluding bank debt and the fair value of financial instruments.

About Tamarack

Tamarack is a Calgary based, oil and natural gas exploration and production company focused on delivering a superior rate of return on capital investment. Tamarack is committed to long-term growth and the increased identification, evaluation and operation of resource plays in the Western Canadian sedimentary basin. Tamarack's strategic direction is focused on two key principles – targeting resource

plays that will provide long-life reserves, and using a rigorous, proven modeling process to carefully manage risk and identify opportunities. The Company's long term strategy involves the identification and development of assets in four different core plays, which will serve to diversify risk and increase capital optionality to enable proper risk management while delivering superior rates of return. To date, Tamarack has established two core plays: Cardium oil play in Lochend, Garrington and the greater Pembina area, including Buck Lake, and the shallow Viking oil play in Redwater and Westlock.

Production

	Three months ended March 31,		
	2014	2013	% change
Production			
Oil and natural gas liquids (bbls/d)	2,333	1,452	61
Natural gas (mcf/d)	11,093	7,496	48
Total (boe/d)	4,182	2,701	55
Percentage of oil and natural gas liquids	56%	54%	

Tamarack announced its production and capital expenditure guidance on January 28, 2014. The average 2014 production is forecasted to be between 5,300 and 5,500 boe/d with the first half of 2014 expected to average approximately 4,700 boe/d. The Company has moved away from providing quarter over quarter production guidance due to the fact it has progressed to pad drilling programs during the first quarter. This pad drilling approach will also allow the Company to continue to drill through the second quarter and are expected to reduce costs, improving capital efficiencies. The Company enjoyed a record first quarter of activity by drilling 14 (11.0 net) wells during the first quarter, however, none of these wells contributed to first quarter production. During the month of April, the Company brought on production 10 (7.2 net) Cardium and Viking wells. Tamarack expects the majority of the remaining 7 (6.8 net) Cardium and Viking wells that were drilled in the first quarter to be brought on production before the end of the second quarter subject to surface access.

Production for the first quarter of 2014 decreased by 4% to 4,182 boe/d from 4,336 boe/d in the fourth quarter of 2013, and increased by 55% from 2,701 boe/d in the first quarter of 2013. The 4% production decrease during the first quarter of 2014, compared to the fourth quarter of 2013, was the result of expected declines from existing production and from unscheduled downtime of a non-operated gas property in Hanlan, which resulted in 67 boe/d of lost production to the quarter average, partially offset by two new farm-in (1.4 net) wells that were tied-in and came on-stream at the end of January adding 435 boe/d, two new farm-in (1.0 net) wells that came on that were rate restricted at the end of the quarter adding 79 boe/d and a full quarter of production from five (4.6 net) new Viking oil wells that came on late in the fourth quarter of 2013 at Redwater adding 205 boe/d to the quarter average.

Crude oil and natural gas liquids production in the first quarter of 2014 was 2,333 bbls/d compared to 2,611 bbls/d in the fourth quarter of 2013. Crude oil and natural gas liquids production decreased 11% quarter-over-quarter as a result of expected declines from existing production, partially offset by two new farm-in (1.4 net) wells that were tied-in and came on-stream at the end of January adding 308 bbls/d, two new farm-in (1.0 net) wells that came on that were rate restricted at the end of the quarter adding 46 bbls/d and a full quarter of production from five (4.6 net) new Viking oil wells that came on late in the fourth quarter of 2013 at Redwater adding 205 bbls/d to the quarter average. The percentage of oil and natural gas liquids weighting decreased to 56% of total production in the first quarter of 2014 compared to

60% of total production during the fourth quarter of 2013. The Company expects its percentage of oil and natural gas liquids weighting to fluctuate between 55% and 62% dependant on the timing of production additions in the Redwater and Wilson Creek areas, where production will be weighted higher to liquids content.

Natural gas production was 11,093 mcf/d in the first quarter of 2014 compared to 10,349 mcf/d in the fourth quarter of 2013. Production increased quarter-over-quarter due to two new farm-in (1.4 net) wells that were tied-in and came on-stream at the end of January adding 764 mcf/d and two new farm-in (1.0 net) wells that came on rate restricted at the end of the quarter adding 197 mcf/d, partially offset by expected declines from existing and from unscheduled downtime of a non-operated gas property in Hanlan which resulted in 402 mcf/d of lost production.

Increases in production for the three months ended March 31, 2014, when compared to the same period in 2013, were due to production from the Sure Energy Inc. ("Sure") acquisition completed in October, 2013, and the successful 2013 drilling program, offset by expected declines from existing production.

Petroleum, Natural Gas Sales and Royalties

	Three months ended		% change
	2014	2013	
March 31			
Revenue			
Oil and NGLs	\$19,575,471	\$10,727,502	82
Natural gas	4,922,784	2,195,377	124
Total	\$24,498,255	\$12,922,879	90
Average realized price			
Oil and NGLs (\$/bbl)	93.23	82.11	14
Natural gas (\$/mcf)	4.93	3.25	52
Combined average (\$/boe)	65.09	53.16	22
Benchmark pricing:			
Edmonton Par (\$/bbl)	99.56	88.13	13
AECO daily index (\$/mcf)	5.67	3.18	78
AECO monthly index (\$/mcf)	4.74	3.07	55
Royalty expenses	\$2,959,833	\$1,449,514	104
\$/boe	7.86	5.96	32
percent of sales	12	11	9

Revenue from crude oil, natural gas and associated natural gas liquids sales increased by 10% to \$24,498,255 in the first quarter of 2014 from \$22,224,185 in the fourth quarter of 2013 and increased by 90% as compared to \$12,922,879 in the first quarter of 2013. Natural gas prices averaged \$4.93/mcf and oil and natural gas liquids prices averaged \$93.23/bbl in the first quarter of 2014 as compared to \$3.72/mcf and \$77.78/bbl in the fourth quarter of 2013 and compared to \$3.25/mcf and \$82.11/bbl in the first quarter of 2013, respectively.

The 10% increase in revenue during the first quarter of 2014, when compared to the fourth quarter of 2013, was primarily the result of a 20% increase in oil and natural gas liquids pricing, a 7% increase in

natural gas production and a 32% increase in natural gas prices, partially offset by the 4% decrease in crude oil and natural gas liquids production.

The 90% increase to revenue in the first quarter of 2014, compared to the first quarter of 2013, was primarily caused by a 55% increase in production, a 52% increase to natural gas prices and 14% increase in oil and natural gas liquids pricing.

The Company's realized crude oil and natural gas liquids prices for the three months ended March 31, 2014 and 2013 generally correlate to the Edmonton Par Canadian price posting for the same period. Natural gas liquids are priced at varying discounts to Edmonton Par Canadian price posting depending on market conditions, pipeline capacity and the season.

The Company's realized natural gas prices for the three months ended March 31, 2014, excluding the impact of physical natural gas hedges (realized natural gas price was \$5.56/mcf before hedge impact, which reduced natural gas price to \$4.93/mcf) generally correlate to the AECO daily index pricing, but may not always correlate to the AECO monthly index pricing. The reason for the variance is that in periods of rapid price increases or declines, a portion of the Company's sales, which are based mainly on the daily index, will not correlate to the monthly index. The Company's realized natural gas prices for the three months ended March 31, 2013, generally correlate to the AECO daily index pricing, but may not always correlate to the AECO monthly index pricing.

At March 31, 2014, the Company held derivative commodity contracts as follows:

Subject contract	Notional quantity	Remaining term	Hedge type	Strike price
Crude oil	500 bbls/day	April 1, 2014 – September 30, 2014	WTI fixed price	Cdn \$90.59
Crude oil	200 bbls/day	April 1, 2014 – June 30, 2014	WTI fixed price	Cdn \$91.90
Crude oil	300 bbls/day	April 1, 2014 – June 30, 2014	WTI fixed price	Cdn \$100.10
Crude oil	400 bbls/day	July 1, 2014 – September 30, 2014	WTI fixed price	Cdn \$95.50
Crude oil	700 bbls/day	October 1, 2014 – December 31, 2014	WTI fixed price	Cdn \$93.36
Crude oil	200 bbls/day	January 1, 2015 – March 31, 2015	WTI fixed price	Cdn \$95.65
Crude oil	400 bbls/day	January 1, 2015 – March 31, 2015	WTI fixed price	Cdn \$100.50
Crude oil	300 bbls/day	April 1, 2015 – June 30, 2015	WTI fixed price	Cdn \$100.00
Natural gas	1,000 GJ/day	October 1, 2014 – December 31, 2014	AECO fixed price	Cdn \$4.30

These contracts as at March 31, 2014 had an unrealized loss of \$3,904,207 that has been recorded on the balance sheet.

At March 31, 2014, the Company held physical commodity contracts as follows:

Subject contract	Notional quantity	Remaining term	Hedge type	Strike price
Natural gas	5,000 GJ/day	April 1, 2014 – June 30, 2014	AECO fixed price	Cdn \$3.402
Natural gas	5,000 GJ/day	July 1, 2014 – September 30, 2014	AECO fixed price	Cdn \$3.579
Natural gas	4,000 GJ/day	October 1, 2014 – December 31, 2014	AECO fixed price	Cdn \$3.70

Royalty expenses for the first quarter of 2014 were \$7.86/boe or \$2,959,833, representing 12% of revenue, compared to a royalty expense for the fourth quarter of 2013 of \$4.30/boe or \$1,716,084, representing 8% of revenue. The increase in royalties as a percentage of revenue in the first quarter of 2014, as compared to the fourth quarter of 2013, was related to the payment of freehold mineral tax in the first quarter of 2014 and higher gas royalty payments due to the continued improvement in gas prices.

The Company expects royalty rates to fluctuate between 10% and 12% dependant on the number of new wells being drilled on Company owned lands with the initial crown royalty incentive rate of 5%.

The royalty expenses for the first quarter of 2013 were \$5.96/boe or \$1,449,514, representing 11% of revenue. The increase in royalties as a percentage of revenue in the first quarter of 2014, as compared to the first quarter of 2013, was related to the increase in the number of wells required to pay the freehold mineral tax and higher gas royalty payments due to higher gas prices.

Production Expenses

	Three months ended		
	March 31		
	2014	2013	% change
Gross costs	\$4,986,256	\$3,120,949	60
Total (\$/boe)	\$13.25	\$12.84	3

Production expenses for the first quarter of 2014 were \$13.25/boe compared to \$13.65/boe incurred during the fourth quarter of 2013. The decrease in per unit costs during the quarter was the result of completing a number of planned work-overs during the fourth quarter of 2013 and the planned initiatives of reducing the operating costs on the Hatton heavy oil asset that the Company acquired during the fourth quarter through the Sure acquisition. On a dollar basis, overall costs decreased in the first quarter of 2014 by 8% to \$4,986,256 from the \$5,443,126 incurred during the fourth quarter of 2013. The decrease in total production costs resulted from the 4% decrease in production and the 3% decrease to the per unit cost.

Production expenses on a boe basis were \$13.25/boe in the first quarter of 2014 as compared to \$12.84/boe during the first quarter of 2013. Production expenses for the three months ended March 31, 2014 increased by 60% to \$4,986,256, compared to \$3,120,949 in the same period in 2013. The increase in total production costs on a per boe basis resulted from the increase in higher cost oil production weighting (56% versus 54%) and the acquisition of the higher per unit cost Sure properties. On a dollar basis, overall costs increased from a 55% increase in production and the increase in higher cost oil production weighting.

Operating Netback

(\$/boe)	Three months ended		
	March 31		
	2014	2013	% change
Average realized sales	65.09	53.16	22
Royalty expenses	(7.86)	(5.96)	32
Production expenses	(13.25)	(12.84)	3
Operating field netback	43.98	34.36	28
Realized commodity hedging loss	(3.46)	(0.02)	14,898
Operating netback	40.52	34.34	18

The operating netback for the first quarter of 2014 increased by 14% to \$40.52/boe, compared to \$35.62/boe during the fourth quarter of 2013. The increase was the result of a 20% increase in oil and natural gas liquids prices (\$93.23/bbl versus \$77.78/bbl), a 32% increase in natural gas prices (\$4.93/mcf versus \$3.72/mcf), partially offset by an increase of 83% in royalty expense per boe (\$7.86/boe versus \$4.30/boe) and a realized hedging loss of \$3.46/boe in the first quarter of 2014, compared to a realized hedging loss of \$2.15/boe in the fourth quarter of 2013.

The operating netback for the first quarter of 2014 increased by 18% to \$40.52/boe compared to \$34.34/boe during the first quarter of 2013. The increase was the result of the portion of overall higher netback production related to liquids increasing (56% versus 54%), a 52% increase in natural gas prices (\$4.93/mcf versus \$3.25/mcf), a 14% increase in oil and natural gas liquids prices (\$93.23/bbl versus \$82.11/bbl), partially offset by a realized hedging loss of \$3.46/boe during the first quarter 2014, compared to a \$0.02/boe realized hedging loss during the first quarter of 2013 and an increase of 32% in royalty expense per boe (\$7.86/boe versus \$5.96/boe).

General and Administrative Expenses

	Three months ended March 31		
	2014	2013	% change
Gross costs	\$1,707,943	\$1,189,608	44
Capitalized costs and recoveries	(385,159)	(300,003)	28
General and administrative costs	\$1,322,784	\$889,605	49
Total (\$/boe)	\$3.51	\$3.66	(4)

General and administrative expenses for the first quarter of 2014 were \$3.51/boe on costs of \$1,322,784 compared to \$3.58/boe on costs of \$1,427,653 in the fourth quarter of 2013. The decrease in costs was related to year end costs, such as annual audit, preparation of 2013 tax returns and the evaluation of year-end reserves that occurred in the fourth quarter of 2013, which resulted in higher costs per boe, partially offset by a 4% decrease in production and increase staffing costs.

General and administrative expenses for the first quarter of 2013 were \$3.66/boe on costs of \$889,605. The increased costs in the first quarter of 2014 were related to an increase in the office lease and staffing costs. The decrease in the cost per boe in the first quarter of 2014 was the result of the 55% increase in production.

Stock-based Compensation Expenses

Stock-based compensation expenses of \$537,802, relating to the preferred shares and stock options for the three months ended March 31, 2014, was higher compared to \$285,298 for the same period in 2013, due to the issuance of new options in the fourth quarter of 2013 and the first quarter of 2014. Stock based compensation expense is calculated based on graded vesting periods that are front end loaded.

The Company capitalized \$229,610 of stock-based compensation expenses relating to exploration and development activities for the three months ended March 31, 2014, compared to capitalizing \$124,975 for the same period in 2013.

For the three months ended March 31, 2014 the Company issued 565,000 new options to three new employees at a weighted average exercise price of \$4.64 per share.

Interest

Interest expense, net of interest income, was \$482,689 for the three months ended March 31, 2014, compared to \$451,634 for the same period in 2013. The Company has drawn \$17,493,528 on its revolving operating demand line at March 31, 2014, compared to \$43,532,616 drawn on its line at March 31, 2013. The average amount drawn year-over-year was consistent, \$48.8 million in the first quarter of 2014 compared to \$43.4 million during the first quarter of 2013, thus resulting in similar interest expense.

Depletion, Depreciation, Amortization and Accretion

The Company depletes its property, plant, and equipment based on its proved plus probable reserves. The carrying value of undeveloped land in exploration and evaluation assets is also amortized over its term to expiry which is charged to depletion, depreciation, and amortization expense.

	Three months ended		
	March 31		
	2014	2013	% change
Depletion and depreciation	\$7,302,574	\$4,488,318	63
Amortization of undeveloped leases	732,533	727,537	1
Accretion	145,073	72,779	99
Total	\$8,180,180	\$5,288,634	55
Depletion and depreciation (\$/boe)	\$19.40	\$18.46	5
Amortization (\$/boe)	1.95	2.99	(35)
Accretion (\$/boe)	0.39	0.30	30
Total (\$/boe)	\$21.74	\$21.75	(0)

Depletion, depreciation, amortization and accretion expense on a boe basis for the first quarter of 2014 was 4% higher at \$21.74/boe, compared to \$20.97/boe during the fourth quarter of 2013. Depletion, depreciation, amortization and accretion expense for the first quarter of 2014 was \$8,180,180, compared to \$8,363,415 during the fourth quarter of 2013. The 2% decrease in total depletion, depreciation, amortization, and accretion expense was the result of the 4% decrease in production.

Depletion, depreciation, amortization, and accretion expense on a boe basis for the first quarter of 2014 was \$21.74/boe, compared to \$21.75/boe during the first quarter of 2013. Depletion, depreciation, amortization, and accretion expense for the first quarter of 2014 was \$8,180,180, compared to \$5,288,634 during the first quarter of 2013. The 55% increase in total depletion, depreciation, amortization, and accretion expense was the result of the 55% increase in production.

Income Taxes

The Company did not incur any cash tax expense in the three months ended March 31, 2014, nor does it expect to pay any cash taxes in 2014 or in 2015 based on current commodity prices, forecast taxable income, existing tax pools, and planned capital expenditures.

For the three months ended March 31, 2014, a deferred income tax expense of \$776,161 was recognized, compared to a deferred income tax expense of \$194,048 for the same period in 2013.

Funds from Operations and Net Income

Funds from operations during the first quarter of 2014 were \$13,445,163 (\$0.26 per share basic and \$0.25 per share diluted) compared to funds from operations of \$10,505,272 (\$0.24 per share basic and \$0.23 per share diluted) for the fourth quarter of 2013. The increase in funds from operations is the result of the 20% increase in oil and natural gas liquids prices and the 32% increase in natural gas prices, partially offset by the 83% increase in the cost of royalties per boe and the 4% decrease in production quarter-over-quarter. Funds from operations during the fourth quarter of 2013 were also lower due to \$1,645,116 of transaction costs associated with the Sure acquisition.

Funds from operations during the three months ended March 31, 2014 were \$13,445,163 (\$0.26 per share basic and \$0.25 per share diluted), compared to funds from operations of \$7,005,572 (\$0.24 per share basic and diluted) for the same period in 2013. The increase in funds from operations is the result of increased production from the successful 2013 drilling program, the acquisition of Sure, 52% increase in natural gas prices and a 14% increase in oil and natural gas liquid prices. Funds from operations per share in the first quarter of 2014 were impacted as a result of the \$60.2 million equity issuance that closed on February 19, 2014, the benefit of which has not yet been realized.

The Company had a net income of \$1,790,681 (\$0.03 per share basic and \$0.03 per share diluted) during the three months ended March 31, 2014, compared to a net income of \$10,854,769 (\$0.24 per share basic and \$0.24 per share diluted) for the fourth quarter of 2013. The Company recorded a lower net income for the three months ended March 31, 2014 compared to the fourth quarter of 2013 due to a \$10,053,750 gain being recorded on the Sure acquisition during the fourth quarter of 2013, a higher unrealized loss on financial instruments, partially offset by lower production costs and a 10% increase in revenue.

The Company had net income of \$1,790,681 (\$0.03 per share basic and \$0.03 per share diluted) during the three months ended March 31, 2014, compared to a net income of \$296,846 (\$0.01 per share basic and diluted) for the same period in 2013. The Company recorded a higher net income for the three months ended March 31, 2014 as compared to the same period in 2013, due to increased funds from operations due to increased production, a 52% increase in natural gas prices, a 14% increase in oil and natural gas liquid prices, partially offset by a higher realized loss on financial instruments, higher operating and royalty expenses, higher depletion, depreciation and amortization costs and higher deferred income tax expense.

Capital Expenditures (including exploration and evaluation expenditures)

The following table summarizes capital spending and property dispositions, excluding non-cash items:

	Three months ended		
	March 31		
	2014	2013	% change

During the first quarter of 2014, the Company completed and equipped one (0.28 net) 1.5-mile horizontal Cardium farm-in well, drilled, completed and equipped one (0.58 net) 1.5-mile horizontal Cardium farm-in well, two (1.46 net) 1-mile horizontal farm-in Cardium wells, three (1.5 net) 1-mile horizontal Cardium wells in Garrington, drilled another one (0.88 net) 1.5-mile horizontal Cardium farm-in well, five (4.71 net) horizontal Viking oil wells and spudded two (1.88 net) horizontal Cardium farm-in wells. The Company also acquired additional working interest in various lands that were included in the farm-in and acquired 1,760 net acres of undeveloped acreage on lands in the greater Pembina area. The Company's undeveloped acreage was 211,408 acres at the end of the first quarter of 2014.

For the three months ended March 31, 2014 the Company also disposed of its interest in a non-core property for \$383,853, resulting in a loss on sale of \$1,101,884. Production associated with this property was 18 boe/d and had 83 acres of undeveloped land.

Liquidity and Capital Resources

Tamarack's net debt, including working capital deficiency excluding the fair value of financial instruments, was \$37,130,296 at March 31, 2014. Tamarack's net debt at March 31, 2013, was \$52,397,617. Tamarack's net debt to annualized funds from operations in the first quarter was 0.69 times at March 31, 2014, compared to 1.87 times at March 31, 2013.

On February 19, 2014, the Company completed a bought deal financing by issuing 14,000,000 common shares at \$4.30 per share for total gross proceeds of \$60,200,000. The net proceeds of the financing was initially used to repay outstanding indebtedness and will fund the \$90-92 million capital budget for 2014, focused on drilling Cardium horizontal and Viking oil horizontal development wells. This drilling program will focus on accelerating horizontal Cardium oil development in the greater Pembina area and on the Farm-in lands.

At March 31, 2014 and April 30, 2014, there were 60,168,718 common shares, 1,382,250 preferred shares and 3,729,551 options outstanding. At December 31, 2013 there were 46,168,718 common shares, 1,382,250 preferred shares and 3,164,551 options outstanding. The Company had 52,546,496 weighted average basic common shares outstanding during the three months ended March 31, 2014.

The Company has an operating demand line of credit in the amount of \$90,000,000 and an \$18,000,000

non-revolving acquisition/development demand line. The interest rate on the revolving operating demand line of credit is determined through a pricing grid that categorizes based on a net debt to cash flow ratio. The interest rate will vary from a low of the bank's prime rate plus 0.5%, to a high of the bank's prime rate plus 2.5% and the non-revolving acquisition/development demand line of credit will be an additional 0.5% over the applicable interest rate derived from the pricing grid. The credit facility has been secured by a \$155,000,000 supplemental debenture with a floating charge over all assets. As the available lending limits of the facilities are based on the bank's interpretation of the Company's reserves and future commodity prices, there can be no assurance as to the amount of available facilities that will be determined at each scheduled review. The next review is scheduled for the second quarter of 2014.

Pursuant to the terms of the credit facility, the Company has provided a covenant that at all times its working capital ratio shall not be less than 1.0 to 1.0. The working capital ratio is defined under the terms of the credit facilities as current assets, excluding derivative contracts, including the undrawn portion of the revolving operating demand line credit facility, to current liabilities, excluding any current bank indebtedness and derivative liabilities. As at March 31, 2014 the working capital ratio was 2.4 to 1.0 and the Company is in compliance with all covenants.

Although commodity price volatility continues in the oil and gas industry, Tamarack's strategy remains focused on the acquisition, development and production of petroleum and natural gas properties in western Canada. Subsequent to the equity financing completed in February, 2014, Tamarack has the flexibility with its current cash flow from operations and balance sheet to take advantage of opportunities that arise from an environment with commodity price volatility.

Commitments

In the normal course of business, the Company has obligations which represent contracts and other commitments with an estimated payment of \$508,774 for 2014, \$720,121 for 2015, \$436,044 for 2016 and \$128,343 for 2017. These obligations are related to office lease commitments.

The Company also has drilling and completion commitments related to the farm-in entered into on August 19, 2013. Overall 20 net wells must be drilled by December 31, 2016. As of March 31, 2014, the Company had satisfied approximately 37% of the drilling commitment. The Company estimates the capital expenditures to fulfill the remainder of this commitment will be approximately \$40 to \$47 million.

2014 Guidance

On January 28, 2014, the Company disclosed production guidance for 2014. The 2014 production guidance is based on a capital program of \$90-92 million that was set based on an average WTI price of \$90.00/bbl Canadian with a \$9.00 WTI / Edmonton Par differential and an average AECO price of \$3.25/GJ. Highlights include:

- 2014 estimate average production rate of 5,300 to 5,500 boe/d (approximately 60% liquids)
- 2014 estimate exit production rate of between 6,500 to 6,700 boe/d (approximately 60% liquids)
- Estimated 2014 year end debt to annualized fourth quarter of 2014 cash flow from operation of less than 1.0 times

The 2014 capital program and resulting production guidance may be increased or decreased during 2014, relative to increases or decreases to realized commodity prices and actual cash flow from operations.

⁽¹⁾ Excluding fair value of financial instruments

Significant factors and trends that have impacted the Company's results during the above periods include:

- The volatility in commodity prices and the effect this has had on revenue and net income (loss).
- The volatility in forward price curves affects the mark-to-market calculation which results in swings in earnings.
- On August 19, 2013, the Company entered into a farm-in agreement with an industry major to earn 70% working interest in up to 113 net sections of prospective Cardium lands directly offsetting proven ongoing development projects in the greater Pembina area.
- On October 9, 2013 the Company acquired Sure; this acquisition added \$4,214,745 to oil and natural gas revenue and contributed \$239,547 to net income.
- The Company recorded a \$10,053,750 gain on the Sure Q4 2014 acquisition as the fair value paid was less than the fair value of the assets acquired.
- Oil volumes have continued to grow due to successful drilling at Lochend, Garrington and

Red Water, and from the Echoex Ltd. (“Echoex”) acquisition. As a result, oil and natural gas liquids weighting has increased from 32% of total production in the first quarter of 2012 to 60% in the fourth quarter of 2013.

- On April 17, 2012 the Company acquired Echoex. In 2012, this acquisition added \$9,468,534 to oil and natural gas revenue and contributed \$1,388,110 to net income.
- The Company recorded \$1,645,116 in transaction costs in the fourth quarter of 2013 related to the Sure acquisition and \$1,065,190 in transaction costs related to the Echoex acquisition in the second and third quarters of 2012.
- The recorded impairment charges on the Company’s natural gas related cash generating units (“CGU’s”) due to falling gas prices in the amount of \$1,640,000 in the fourth quarter of 2012.

Critical Accounting Estimates

Management is required to make judgments, assumptions, and estimates in applying its accounting policies which have significant impact on the financial results of the Company. The following outlines the accounting policies involving the use of estimates that are critical to understanding the financial condition and results of operations of the Company:

- (a) **Oil and natural gas reserves** – Oil and natural gas reserves, as defined by the Canadian Securities Administrators in National Instrument 51-101 with reference to the Canadian Oil and Natural Gas Evaluation Handbook, are those reserves that can be estimated with a high degree of certainty to be recoverable. It is likely that the actual remaining quantities recovered will exceed the estimated proved reserves.

An independent reserve evaluator using all available geological and reservoir data, as well as historical production data, has prepared the Company’s oil and natural gas reserve estimates. Estimates are reviewed and revised as appropriate. Revisions occur as a result of changes in prices, costs, fiscal regimes, reservoir performance or a change in the Company’s development plans.

- (b) **Exploration and evaluation assets** – The costs of drilling exploratory wells are initially capitalized as exploration and evaluation (“E&E”) assets pending the evaluation of commercial reserves. Commercial reserves are defined as the existence of proved and probable reserves which are determined to be technically feasible and commercially viable to extract. Reserves may be considered commercially producible if management has the intention of developing and producing them based on factors such as project economics, quantities of reserves, expected production techniques, estimated production costs and capital expenditures.

- (c) **Depletion, depreciation, amortization and impairment** – Property, plant and equipment is measured at cost less accumulated depletion, depreciation, amortization, and impairment losses. The net carrying value of property, plant and equipment and estimated future development costs is depleted using the unit-of-production method based on estimated proved and probable reserves. Changes in estimated proved and probable reserves or future development costs have a direct impact on the calculation of depletion expense.

The Company is required to use judgment when designating the nature of oil and gas activities as exploration and evaluation assets or development and production assets within property, plant and equipment. Exploration and evaluation assets and development and production assets are aggregated into CGUs based on their ability to generate largely independent cash flows. The

allocation of the Company's assets into CGUs requires significant judgment with respect to use of shared infrastructure, existence of active markets for the Company's products and the way in which management monitors operations.

Exploration and evaluation expenditures relating to activities to explore and evaluate oil and natural gas properties are initially capitalized and include costs associated with the acquisition of licenses, technical services and studies, seismic acquisition, exploration drilling and testing, directly attributable overhead and administration expenses, and costs associated with retiring the assets. Exploration and evaluation assets are carried forward until technical feasibility and commercial viability of extracting a mineral resource is determined. Technical feasibility and commercial viability of extracting a mineral resource is considered to be determined when proved and/or probable reserves are determined to exist. E&E assets are tested for impairment when facts and circumstances suggest that the carrying amount of E&E assets may exceed their recoverable amount, by comparing the relevant costs to the fair value of CGUs, aggregated at the segment level. The determination of the fair value of CGUs requires the use of assumptions and estimates including quantities of recoverable reserves, production quantities, future commodity prices and development and operating costs. Changes in any of these assumptions, such as a downward revision in reserves, decrease in commodity prices or increase in costs, could impact the fair value.

The Company assesses property, plant and equipment for impairment whenever events or changes in circumstances indicate that the carrying value of an asset or group of assets may not be recoverable. If any such indication of impairment exists, the Company performs an impairment test related to the specific CGU. The determination of fair value of CGUs requires the use of assumptions and estimates including quantities of recoverable reserves, production quantities, future commodity prices and development and operating costs. Changes in any of these assumptions, such as a downward revision in reserves, decrease in commodity prices or increase in costs, could impact the fair value.

- (d) **Decommissioning obligations** – The decommissioning obligations are estimated based on existing laws, contracts or other policies. The fair value of the obligation is based on estimated future costs for abandonments and reclamations discounted at a risk free rate. The costs are included in property, plant and equipment and amortized over its useful life. The liability is adjusted each reporting period to reflect the passage of time, with the accretion expense charged to net earnings, and for revisions to the estimated future cash flows. By their nature, these estimates are subject to measurement uncertainty and the impact on the consolidated financial statements could be material.
- (e) **Share-based compensation** – The Company uses the fair value method for valuing stock option and preferred shares grants. Under this method, compensation cost attributable to all share options and preferred shares granted is measured at fair value at the grant date and expensed over the vesting period. The Black-Scholes option pricing model is used to estimate the fair value of the stock options and preferred shares and it contains such estimates as expected share price volatility and the Company's risk-free interest rate. Any changes in these assumptions could alter the fair value and net earnings.
- (f) **Income taxes** – The determination of income and other tax liabilities requires interpretation of complex laws and regulations often involving multiple jurisdictions. All tax filings are subject to audit and potential reassessment after the lapse of considerable time. Accordingly, the actual income tax liability may differ significantly from that estimated and recorded.

(g) **Financial instruments** – The Company utilizes financial instruments to manage the exposure to market risks relating to commodity prices. Fair values of derivative contracts fluctuate depending on the underlying estimate of future commodity prices and foreign currency exchange rates.

Business Risks

Tamarack faces, or will face, a number of business risks, both known and unknown, with respect to its oil and gas exploration, development, and production activities that could cause actual results or events to differ materially from those forecasted. Most of these risks (financial, operational or regulatory) are not within the Company's control. While the following sections discuss some of these risks, they should not be construed as exhaustive.

Financial Risks

Financial risks include commodity pricing; exchange and interest rates; and volatile markets.

Commodity price fluctuations result from market forces completely out of the Company's control and can significantly affect the Company's financial results. In addition, fluctuations between the Canadian dollar and the US dollar can also have a significant impact. Expenses are all incurred in Canadian dollars while crude oil, and to some extent natural gas, prices are based on reference prices denominated in US dollars. As a result of both of these factors, Tamarack may enter into derivative instruments to partially mitigate the effects of downward price volatility. To evaluate the need for hedging, Management, with direction from the Board of Directors, monitors future pricing trends together with the cash flow necessary to fulfill capital expenditure requirements. Tamarack will only enter into a hedge to reduce downside uncertainty of pricing, not as a speculative venture.

Operational Risks

Oil and natural gas operations involve many risks that even a combination of experience, knowledge and careful evaluation may not be able to overcome. The long-term commercial success of Tamarack depends on its ability to find, acquire, develop and commercially produce oil and natural gas reserves. Without the continual addition of new reserves, existing reserves and their subsequent production will decline over time as they are exploited. A future increase in Tamarack's reserves will depend not only on its ability to explore and develop any properties it may have, but also on its ability to select and acquire suitable producing properties or prospects. No assurance can be given that further commercial quantities of oil and natural gas will be discovered or acquired by Tamarack.

Tamarack endeavors to mitigate these risks by, among other things, ensuring that its employees are highly qualified and motivated. Prior to initiating capital projects, the Tamarack technical team completes an economic analysis, which attempts to reflect the risks involved in successfully completing the project. In an effort to mitigate the risk of not finding new reserves, or of finding reserves that are not economically viable, Tamarack utilizes various technical tools, such as 2D and 3D seismic data, rock sample analysis and the latest drilling and completing technology.

Insurance is in place to protect against major asset destruction or business interruption, including well blow-outs and pollution. In addition, Tamarack cultivates long-term relationships with its suppliers in an effort to ensure good service regardless of the current cycle of oil and gas activity.

Operational risk is mitigated by having Tamarack employees address the continued development of a new or established reservoir on a go-forward basis, using the same procedure that is used to address exploration risk. The decision to produce reserves is made based on the amount of capital required,

production practices and reservoir quality. Tamarack evaluates reservoir development based on the timing, amount of additional capital required and the expected change in production values. Finding and development costs are controlled when capital is employed cost effectively.

Regulatory Risks

Regulatory risks include the possibility of changes to royalty, tax, environmental and safety legislation. Tamarack endeavours to anticipate the costs related to compliance and budget sensibly for them. Changes to environmental and safety legislation may also cause delays to Tamarack's drilling plans, its production efficiencies and may adversely affect its future earnings. Restrictive new legislation is a risk the Company cannot control.

Forward Looking Statements

Certain statements contained within this MD&A constitute forward-looking statements within the meaning of applicable securities laws. All statements other than statements of historical fact may be forward-looking statements. Forward-looking statements are often, but not always, identified by the use of words such as "seek", "anticipate", "budget", "plan", "continue", "estimate", "expect", "forecast", "may", "will", "project", "predict", "potential", "targeting", "intend", "could", "might", "should", "believe" and similar expressions. The Company believes that the expectations reflected in such forward-looking statements are reasonable but no assurance can be given that such expectations will prove to be correct and such forward-looking statements should not be unduly relied upon.

In particular, this MD&A contains forward-looking statements pertaining to:

- Estimated average and exit production rates in 2014.
- Tamarack's primary focus areas for production growth.
- Future drilling plans.
- Deferred tax liabilities.
- The interest rates under Tamarack's credit facilities.
- Future capital expenditures and capital program funding.
- Estimated general and administrative costs.
- Estimated 2014 year end debt to annualized fourth quarter of 2014 funds flow from operation.
- Derivative contracts and Tamarack's commodity price and foreign exchange rate risk management activities.
- The timing and impact of implementing new accounting policies.
- The ability of the Company to continue to drill through the second quarter and to reduce costs by improving capital efficiencies.
- Expectations as to oil and natural gas weighting in 2014.
- Expectations as to royalty rates in 2014.
- The use of proceeds from the Company's February 2014 bought deal financing.
- The ability of the Company to take advantage of opportunities that may arise due to commodity price volatility.

With respect to the forward-looking statements contained in this MD&A, we have made assumptions regarding, among other things:

- future commodity prices;
- expected operating costs;
- estimated reserves of oil and natural gas;
- the ability to obtain equipment and services in the field in a timely and efficient manner;
- the ability to add production and reserves through acquisition and/or drilling at competitive prices;
- the timing of anticipated future production additions from the Company's properties;
- the realization of anticipated benefits of acquisitions, including the acquisition of undeveloped lands which Tamarack considers prospective for hydrocarbons;
- drilling results including field production rates and decline rates;
- the continued application of horizontal drilling and fracturing techniques and pad drilling;
- the continued availability of capital and skilled personnel;
- the ability to obtain financing on acceptable terms;
- the impact of increasing competition;
- the ability of the Company to secure adequate product transportation;
- the ability to enter into future commodity derivative contracts on acceptable terms; and
- the continuation of the current tax and regulatory regime.

Since forward-looking statements and information address future events and conditions, by their very nature they involve inherent risks and uncertainties. Actual results may differ materially from those currently anticipated or implied by such forward-looking statements due to a number of factors and risks. These include:

- the risks associated with the oil and gas industry in general such as operational risks in development, exploration and production;
- delays or changes in plans with respect to exploration or development projects or capital expenditures;
- volatility in market prices for oil and natural gas;
- uncertainties associated with estimating oil and natural gas reserves;
- geological, technical, drilling and processing problems;
- fluctuations in foreign exchange or interest rates and stock market volatility;
- marketing and transportation;
- environmental risks;
- competition for, among other things, capital, acquisition of reserves, undeveloped lands and skilled personnel;
- the ability to access sufficient capital from internal and external sources; and

- changes in tax, royalty and environmental legislation.

Readers are cautioned that the foregoing list of risk factors is not exhaustive. Additional information on these and other factors that could affect the business, operations or financial results of Tamarack are included in reports on file with applicable securities regulatory authorities, including but not limited to Tamarack's revised Annual Information Form for the year ended December 31, 2013, which may be accessed on Tamarack's SEDAR profile at www.sedar.com.

The forward-looking statements contained in this MD&A are made as of the date hereof and Tamarack undertakes no obligation to update publicly or revise any forward-looking statements or information, whether as a result of new information, future events or otherwise, unless so required by applicable securities laws.

TAMARACK VALLEY ENERGY LTD.

Notes to the Condensed Consolidated Interim Financial Statements
For the three months ended March 31, 2014 and 2013 (unaudited)

1. Reporting entity:

Tamarack Valley Energy Ltd. (the “Company”) is incorporated under the Business Corporations Act of Alberta. The consolidated financial statements of the Company are comprised of the Company and its subsidiaries. The Company has the following wholly owned subsidiaries, all of which are incorporated in Canada: Tamarack Acquisition Corp., Tamarack Valley Holdings Corp. and Tamarack Valley Partnership. The Company is engaged in the exploration for, development and production of oil and natural gas.

Tamarack Valley Energy Ltd. is a publicly traded company, incorporated and domiciled in Canada. The address of its registered office is Suite 2500, 450 – 1st Street S.W., Calgary, Alberta, T2P 5H1. The address of its head office is currently 3100, 250 – 6th Avenue S.W., Calgary, Alberta T2P 3H7.

2. Basis of preparation:

(a) Statement of compliance:

The condensed consolidated interim financial statements have been prepared in accordance with International Accounting Standards 34, “Interim Financial Reporting” of International Reporting Standards (“IFRS”).

These condensed consolidated interim financial statements have been prepared following the same accounting policies and methods of computation as the annual consolidated financial statements of the Company for the year ended December 31, 2013. The disclosures provided below are incremental to those included with the annual consolidated financial statements and certain disclosures, which are normally required to be included in the notes to the annual consolidated financial statements, have been condensed or omitted. These condensed consolidated interim financial statements should be read in conjunction with the consolidated financial statements and notes thereto in the Company’s annual filings for the year ended December 31, 2013.

The condensed consolidated interim financial statements were authorized for issue by the Board of Directors on April 30, 2014.

3. Commodity contracts:

It is the Company’s policy to economically hedge some oil and natural gas sales through the use of various financial derivative forward sales contracts and physical sales contracts. The Company does not apply hedge accounting for these contracts. The Company’s production is usually sold using “spot” or near term contracts, with prices fixed at the time of transfer of custody or on the basis of a monthly average market price. The Company, however, may give consideration in certain circumstances to the appropriateness of entering into long term, fixed price marketing contracts. The Company does not enter into commodity contracts other than to meet the Company’s expected sale requirements.

All financial derivative contracts are classified as fair value through profit and loss and are recorded on the balance sheet at fair value. The fair value of forward contracts and swaps is determined by discounting the difference between the contracted prices and level 2 published forward price curves as at the balance sheet date, using the remaining contracted oil and natural gas volumes and a risk-free interest rate (based on published government rates).

TAMARACK VALLEY ENERGY LTD.

Notes to the Condensed Consolidated Interim Financial Statements
For the three months ended March 31, 2014 and 2013 (unaudited)

3. Commodity contracts (continued):

The fair value of options and collars is based on option models that use level 2 inputs, being published information with respect to volatility, prices and interest rates. The derivatives are valued at future value to profit and loss and therefore carrying amount equals future value.

At March 31, 2014, the Company held derivative commodity contracts as follows:

Subject contract	Notional quantity	Remaining term	Hedge type	Strike price	Fair value
Crude oil	500 bbls/day	April 1, 2014 – September 30, 2014	WTI fixed price	Cdn \$90.59	(\$1,739,968)
Crude oil	200 bbls/day	April 1, 2014 – June 30, 2014	WTI fixed price	Cdn \$91.90	(\$348,863)
Crude oil	300 bbls/day	April 1, 2014 – June 30, 2014	WTI fixed price	Cdn \$100.10	(\$299,950)
Crude oil	400 bbls/day	July 1, 2014 – September 30, 2014	WTI fixed price	Cdn \$95.50	(\$466,990)
Crude oil	700 bbls/day	October 1, 2014 – December 31, 2014	WTI fixed price	Cdn \$93.36	(\$777,279)
Crude oil	200 bbls/day	January 1, 2015 – March 31, 2015	WTI fixed price	Cdn \$95.65	(\$131,083)
Crude oil	400 bbls/day	January 1, 2015 – March 31, 2015	WTI fixed price	Cdn \$100.50	(\$89,616)
Crude oil	300 bbls/day	April 1, 2015 – June 30, 2015	WTI fixed price	Cdn \$100.00	(\$28,013)
Natural gas	1,000 GJ/day	October 1, 2014 – December 31, 2014	AECO fixed price	Cdn \$4.30	(\$22,445)

These contracts as at March 31, 2014 had an unrealized loss of \$3,904,207 that has been recorded on the balance sheet.

All physical commodity contracts are considered executory contracts and are not recorded at fair value on the balance sheet. On settlement the realized benefit or loss is recognized in oil and natural gas revenue. At March 31, 2014, the Company held physical commodity contracts as follows:

Subject contract	Notional quantity	Remaining term	Hedge type	Strike price
Natural gas	5,000 GJ/day	April 1, 2014 – June 30, 2014	AECO fixed price	Cdn \$3.402
Natural gas	5,000 GJ/day	July 1, 2014 – September 30, 2014	AECO fixed price	Cdn \$3.579
Natural gas	4,000 GJ/day	October 1, 2014 – December 31, 2014	AECO fixed price	Cdn \$3.70

TAMARACK VALLEY ENERGY LTD.

At December 31, 2013	\$221,156,253	\$155,507	\$221,311,760
At March 31, 2014	\$234,371,029	\$147,781	\$234,518,810

TAMARACK VALLEY ENERGY LTD.

Notes to the Condensed Consolidated Interim Financial Statements
For the three months ended March 31, 2014 and 2013 (unaudited)

4. Property, plant and equipment (continued):

For the three months ended March 31, 2014 the Company disposed of its interest in a non-core property for \$383,853, resulting in a loss on sale of \$1,101,884.

The calculation of depletion at March 31, 2014 includes estimated future development costs of \$208,063,000 (December 31, 2013 – \$203,235,000) associated with the development of the Company's proved plus probable reserves and excludes salvage value of \$16,267,000 (December 31, 2013 – \$16,000,000).

5. Exploration and evaluation assets:

	Total
Cost:	
Balance at January 1, 2013	\$23,385,606
Additions	15,318,324
Transfer to property, plant and equipment	(11,889,301)
Balance at December 31, 2013	26,814,629
Additions	5,405,817
Transfer to property, plant and equipment	(1,285,340)
Balance at March 31, 2014	\$30,935,106
Amortization and impairment:	
Balance at January 1, 2013	\$12,085,037
Amortization	2,866,677
Exploration and evaluation impairment	473,563
Transfer to property, plant and equipment	(267,038)
Balance at December 31, 2013	15,158,239
Amortization	732,533
Exploration and evaluation impairment	–
Transfer to property, plant and equipment	(86,213)
Balance at March 31, 2014	\$ 15,804,559
	Total
Carrying amounts:	
At December 31, 2013	\$11,656,390
At March 31, 2014	\$15,130,547

Exploration and evaluation (E&E) assets consist of the Company's exploration projects which are pending the determination of proven or probable reserves. Additions represent the Company's share of costs incurred on E&E assets during the period. For the year ended December 31, 2013 the Company recognized an impairment of \$473,563 related to a recompletion attempt on a heavy oil well that was unsuccessful and a decision not drill a heavy well whose well site had been constructed.

TAMARACK VALLEY ENERGY LTD.

Notes to the Condensed Consolidated Interim Financial Statements
For the three months ended March 31, 2014 and 2013 (unaudited)

6. Decommissioning obligations:

The decommissioning obligations result from net ownership interests in oil and natural gas assets including well sites, gathering systems and processing facilities. The Company estimates the total undiscounted amount of cash flows required to settle its decommissioning obligations to be approximately \$22.3 million at March 31, 2014 (December 31, 2013 – \$21.6 million), which is expected to be incurred between 2014 and 2038. A risk-free rate of 3.0% (2013 – 3.0%) and an inflation rate of 2% (2013 – 2%) were used to calculate the fair value of the decommissioning obligations at March 31, 2014. A reconciliation of the decommissioning obligations is provided below:

	March 31, 2014	December 31, 2013
Balance, beginning of the period	\$19,801,991	\$ 12,149,514
Liabilities incurred	679,136	1,013,232
Liabilities acquired	–	7,107,113
Revision	–	(604,845)
Expenditures	(39,177)	(104,854)
Liabilities disposed	(102,594)	(106,794)
Accretion	145,073	348,625
Balance, end of the period	\$20,484,429	\$19,801,991

7. Supplemental cash flow information:

Changes in non-cash working capital is comprised of:

	2014	2013
Source (use of cash):		
Accounts receivable	\$(2,042,915)	\$(512,361)
Prepaid expenses and deposits	37,222	6,837
Accounts payable and accrued liabilities	11,674,251	5,044,620
Working capital deficiency on acquisition	–	–
	\$9,668,558	\$4,539,096
Related to operating activities	\$2,488,883	\$1,918,718
Related to investing activities	7,179,675	2,620,378

TAMARACK VALLEY ENERGY LTD.

Notes to the Condensed Consolidated Interim Financial Statements
For the three months ended March 31, 2014 and 2013 (unaudited)

8. Income per share:

The following table summarizes the net income and weighted average shares used in calculating the net income per share:

	2014	2013
Net income for the period	\$1,790,681	\$296,846
Weighted average shares - basic	52,546,496	29,706,752
Weighted average shares - diluted	53,646,513	29,706,752
Net income per share-basic	\$ 0.03	\$ 0.01
Net income per share-diluted	\$ 0.03	\$ 0.01

Per share amounts have been calculated using the weighted average number of shares outstanding. For the three months ended March 31, 2014, 460,804 stock options and preferred shares were excluded from the diluted earnings per share as they were anti-dilutive. For the three months March 31, 2013, no common shares were added to the basic weighted average number of common shares outstanding for the diluted effect of preferred shares and stock options, as they were anti-dilutive, and no adjustments to earnings were necessary.

9. Share capital:

On February 19, 2014, the Company completed a bought deal financing by issuing 14,000,000 Common Shares at \$4.30 per share for total gross proceeds of \$60,200,000.

10. Bank debt:

At March 31, 2014 the Company has a revolving operating demand line of \$90,000,000 and an \$18,000,000 non-revolving acquisition/development demand line with a Canadian chartered bank. The interest rate on the revolving operating demand line of credit is determined through a pricing grid that categorizes based on a net debt to cash flow ratio. The interest rate will vary from a low of the bank's prime rate plus 0.5% to a high of the bank's prime rate plus 2.5% as derived from the pricing grid.

The standby fee for the operating demand line of credit will vary as per the pricing grid from a low of 0.2% to a high of 0.45% on the undrawn portion of the credit facilities. The facility is secured by a \$155,000,000 debenture with a floating charge over all assets. As the available lending limits of the facilities are based on the bank's interpretation of the Company's reserves and future commodity prices, there can be no assurance as to the amount of available facilities that will be determined at each scheduled review. The next review is scheduled for the second quarter of 2014.

Pursuant to the terms of the credit facility, the Company has provided a covenant that at all times its adjusted working capital ratio shall not be less than 1.0 to 1.0. The adjusted working capital ratio is defined under the terms of the credit facilities as current assets excluding derivative assets, including the undrawn portion of the revolving operating demand line credit facility, to current liabilities, excluding any current bank indebtedness and derivative liabilities.

TAMARACK VALLEY ENERGY LTD.

Notes to the Condensed Consolidated Interim Financial Statements For the three months ended March 31, 2014 and 2013 (unaudited)

10. Bank debt (continued):

At March 31, 2014, the Company had utilized the revolving operating demand line of credit in the amount of \$17,493,528 and the Company was compliant with its working capital ratio at 2.4 to 1.0.

As at March 31, 2014, the Company had letter of guarantees outstanding in the amount of \$383,980 against the credit facility.

11. Share-based payments:

(a) Preferred share plan:

As at March 31, 2014 there are 1,382,250 (December 31, 2013 – 1,382,250) preferred shares outstanding and 1,382,250 (December 31, 2013 – 1,382,250) preferred shares exercisable with an exercise price of \$3.12 per common share. The remaining contractual life is 1.2 years.

(b) Stock option plan:

Under the Company's stock option plan it may grant up to 6,016,872 options to its employees, directors and consultants of which 4,426,236 options and preferred shares have been issued that apply against this maximum amount. Stock options are granted at the market price of the shares at the date of grant, have a five-year term and vest one-third on each of the first, second and third anniversaries from the date of grant.

The fair value of each option granted during the period was estimated on the date of grant using the Black-Scholes option pricing model. The weighted average fair value and weighted average assumptions used to fair value the options are as follows:

	Three months ended March 31, 2014	Year ended December 31, 2013
Risk free rate (%)	1.33	1.68
Expected volatility (%)	80	80
Expected life (years)	5	5
Forfeiture rate (%)	–	–
Dividend (\$ per share)	–	–
Fair value at grant date (\$ per option)	3.01	2.09

The number and weighted average exercise prices of stock option plan are as follows:

	Number of options	Weighted average exercise price
Outstanding, January 1, 2013	1,442,884	\$ 2.67
Granted	1,730,000	3.15
Forfeited	(8,333)	4.80
Outstanding, December 31, 2013	3,164,551	\$ 2.92
Granted	565,000	4.64
Outstanding, March 31, 2014	3,729,551	\$ 3.18

TAMARACK VALLEY ENERGY LTD.

Notes to the Condensed Consolidated Interim Financial Statements
For the three months ended March 31, 2014 and 2013 (unaudited)

12. Share-based payments (continued):

(b) Stock option plan (continued):

The following table summarizes information about stock options outstanding and exercisable at March 31, 2014:

Range of exercise price	Options outstanding			Options exercisable	
	Number outstanding	Weighted average exercise price	Weighted average remaining contractual life (years)	Number exercisable	Weighted average exercise price
\$ 1.86 – 2.70	1,230,384	\$2.07	3.5	410,127	\$2.07
\$ 2.90 – 5.00	2,499,167	\$3.73	4.3	274,720	\$4.35
\$ 1.86 – 5.00	3,729,551	\$3.18	4.0	684,847	\$2.99

13. Commitments and contingencies:

(a) Commitments

In the normal course of business, the Company has obligations which represent contracts and other commitments with an estimated payment of \$508,774 for 2014, \$720,121 for 2015, \$436,044 for 2016 and \$128,343 for 2017. These obligations are related to office lease commitments.

The Company also has drilling and completion commitments related to its recently announced Farm-in. Overall 20 net wells must be drilled by December 31, 2016. As of March 31, 2014, the Company has satisfied approximately 37% of the drilling commitment. The Company estimates the capital expenditures to fulfill the remainder of this commitment will be approximately \$40 to \$47 million.

(b) Contingencies

The Company in the normal course of operations will become subject occasionally to a variety of legal and other claims. Management and the Company's legal counsel evaluate all claims and access as necessary management's best estimate of costs if any to satisfy such claims.
